SUMMARY

B.Tech Information Technology student (CGPA: 8.5) at MAIT, GGSIPU with experience in building production-grade fullstack applications, scalable REST APIs, and **agentic AI systems**. Completed on-site internship delivering role-based backend systems and deployed web applications. Published open-source NPM package with 500+ downloads. Proficient in **C++**, Node.js, React.js, NestJS, PostgreSQL, and AI/Agentic API integration. Solved 600+ LeetCode problems with strong foundations in DSA, DBMS, and OOP.

WORK EXPERIENCE

- Full Stack Developer Intern - [MyCleaners](#), Gurugram, Haryana (On-Site)**Jan 2026 - Apr 2026
- Designed and implemented 20+ **RESTful APIs** for role-based store management system using **Node.js**, **Express**, **Prisma**, and **PostgreSQL**.
 - Built core modules including user management, order processing, and invoice workflows with relational schema modeling.
 - Developed complete company website from scratch using **Next.js**, deployed on [Vercel](#) with SSR and optimized performance.

PROJECTS

- Skill-Link — Service Marketplace**Hosted — [Repo](#)
- NestJS, PostgreSQL, Prisma ORM, React.js, Redis (Upstash), Razorpay, Cloudinary, OAuth 2.0, RBAC*
- Architected and built the end-to-end **customer-to-organization** service flow — role-based auth, reservations, and service handoff — as sole owner of the backend flow using **NestJS** and **Prisma ORM**.
 - Engineered a transactional **escrow** and virtual wallet system with Prisma transactions, enforcing a 5% platform commission split and OTP-based payout verification.
 - Integrated **Razorpay** payments, a multi-step **KYC** pipeline (Cloudinary + custom guards), **Redis**-backed rate limiting with fail-open fallback, and automated PDF invoicing with async email delivery.

- Agentic AI System - Orchestration**[Repo](#)
- Hermes, OpenClaw, Slack API, Gemini 2.5 Flash, MiniMax*
- Built an autonomous **multi-agent software development workflow** where Hermes orchestrated tasks and OpenClaw generated code, executed tests, and automated GitHub PR creation through Slack-based inter-agent communication.
 - Engineered an end-to-end task pipeline spanning **task delegation**, **LLM-based code generation**, **file writes**, **Git operations**, and **human-review routing**, enabling autonomous task execution with minimal manual intervention.

- Task Runner — AI-Powered Full-Stack Platform**Live — [Repo](#)
- PostgreSQL, Express, React, Node.js, Gemini AI, Redis, BullMQ*
- Built a full-stack AI platform where users can summarize text, translate languages, generate images, and transcribe audio — all powered by Google Gemini AI.
 - Designed a scalable background job system using BullMQ and Redis that processes heavy AI tasks without slowing down the main application.

- Gcommit — Developer CLI Tool (NPM Package)**[NPM](#) — [Repo](#)
- JavaScript, Node.js, CLI, NPM*
- Published an open-source CLI tool to automate structured Git commit message generation, providing in-terminal code review and unused file detection to improve developer workflow.
 - Designed interactive command-line prompts and reusable commit templates following conventional commit standards.
 - 500+ Weekly downloads

SKILLS

Languages	C++, JavaScript, Python , Java, TypeScript, SQL
Backend	Node.js, Express.js, NestJS, REST APIs, Prisma ORM, JWT Authentication, RBAC
Frontend	React.js, Next.js, HTML, CSS, Tailwind CSS
Databases	PostgreSQL, MongoDB, MySQL, Redis
AI / Agentic	Agentic AI Systems, n8n, Automations, Gemini API, Groq
Tools	Git, GitHub, VSCode, Cursor, Postman, Docker
Core CS	DSA(600+ LeetCode), DBMS, OOPS

EDUCATION

2023-2027	BTech in Information Technology, MAIT(GGSIPU)	(CGPA:8.5)
2022	12th, GOVT BOYS SR SEC SCH 1 C-BLK YAMUNA VIHAR, CBSE	(93.4)
